WORK EXPERIENCE

Research Intern at **KUAICV, Korea Univ.**

2025.02 – 2025.08

- Conducted research and experiments on **hand action recognition**, focusing on bidirectional actions.

Leader at **Lett, Own Business**

2023.10 – 2024.10

- Founded Team Lett, challenging tech entrepreneurship across apps and web services.

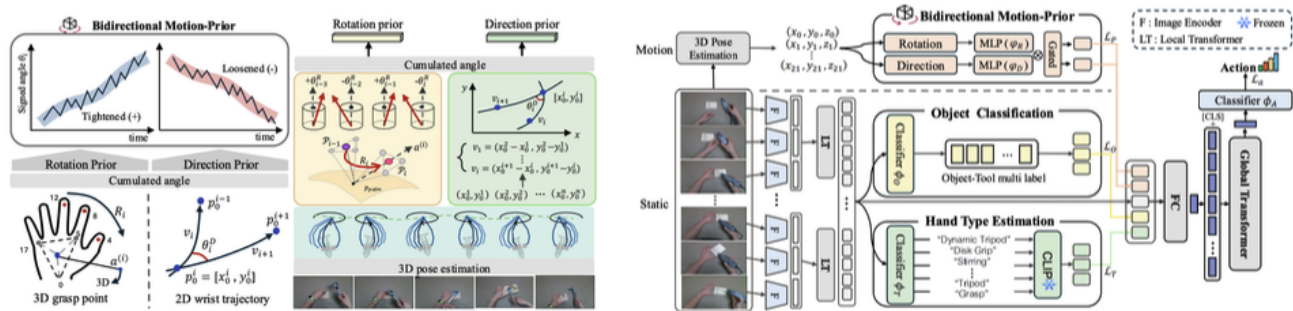

Development Intern at **Triplet, AI Startup**

2023.04 – 2023.09

- Developed WinFMS's workforce management system and an intranet email system.

PROJECTS

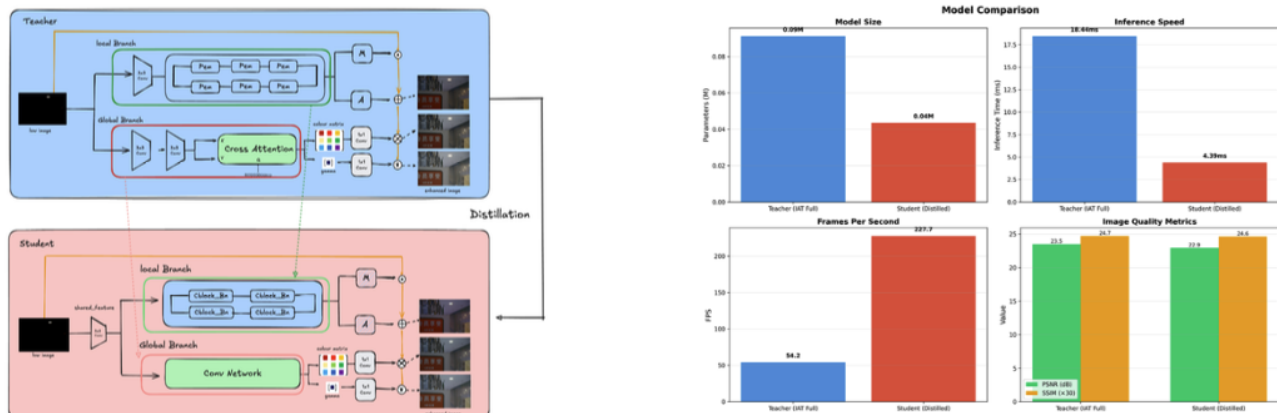

1. Egocentric Hand Dataset and Bidirectional Motion-Priors for Hand Action Recognition

- Identified that existing hand action recognition models poorly handle directionally opposite actions (e.g., screw vs. unscrew) and, using poses extracted by a pose estimator, designed a Bidirectional Motion Module that infers action direction and feeds it as prior information to the baseline model.

- [Full Paper](#) , [Summary research diary](#)

2. Fast Low-Light Image Enhancement via Only Convolutions and Knowledge Distillation

- Developed a lightweight low-light enhancement model by distilling IAT (BMVC 2023), achieving about 4× faster inference with comparable visual quality and significantly fewer parameters.

- [IAT_Student GitHub](#)

3. Pzzk: A Clean, Serverless iOS Calendar

- officially launched the iOS application PZZK, designed with the concept of "the simplest calendar in the world." contribution of Calendar was enabling iCloud synchronization without using a server.
- [Pzzk GitHub](#)

4. Winfms.Inc Human Resource Management System

- participated in the development of WinFMS Inc.'s workforce management system. My main responsibilities included frontend, backend, and database development for the in-house messenger and office supplies management modules.

PUBLICATIONS

- 1. **Egocentric Hand Activity Video Dataset and Bidirectional Motion-Priors for Hand Action Recognition** (preprint), 2025.

SKILLS

Languages	Python, SQL, Javascript
Frameworks	Pytorch, React, Django
Tools	Git, Docker, AWS

EDUCATION

B.S. in Computer Science and Engineering , Hongik University	2020.03 – 2026.03 (expected)
<i>Major GPA: 4.2 / 4.5</i>	

A BRIEF NOTE TO THOSE REVIEWING MY CV

Thank you for taking the time to read my CV. I like to call myself an **ignorant researcher**: whenever I face a problem I want to solve, I throw myself into it, even if I start out knowing very little—whether that meant emailing startups after my military service, trying my hand at a startup of my own, or reaching out to professors to learn AI more deeply.

I have rarely started from the best possible position, but within the opportunities I was given, I have always learned and grown, and I have never disappointed those who chose to trust me. I was not always the most outstanding person when I joined a team, but I have consistently become someone who contributes meaningfully.

I am still ignorant, but I believe that this attitude—of continuously learning, trying, and growing—will lead to meaningful research. Thank you for listening to my story. Sincerely, Jiwoo Lee
